

Producer: Prima Protein AS

Country of origin: Norway

Product Description

Prima Organic Fish Oil is an unrefined high-quality crude fish oil produced primarily from fresh, unpreserved by-products generated during the processing of wild-caught fish for human consumption. When whole wild-caught fish are included, they originate exclusively from sustainable and responsibly managed, officially approved fisheries. No fish species classified as endangered by recognized conservation authorities is used.

An efficient production with high hygienic standard gives a clean fresh product with a very low content of free fatty acids. The production facility operates in accordance with HACCP principles and meets all requirements for quality-assured operations. A natural antioxidant is added to stabilise the oil in accordance with organic production requirements.

Product applications

Prima Organic Fish Oil is an essential component in energy-rich fish feed, enhancing fat structure, acting as an effective flavour binder, and contributing to a highly palatable final feed product.

Product Specifications

Parameter	Specification
Free fatty acids	Typical 3 %, max. 5 %
Moisture and impurities	Typical 0,2 %, max. 1 %
Totox (Anisidine + 2 x Peroxide)	Typical 15, max. 25
Antioxidant	Natural
Contaminants	EU limits

Shelf Life: Minimum 12 months when stored properly in a fresh and dry place.

GMO Statement: The product is not derived from genetically modified organisms (GMO).

Packaging: Bulk delivery / 1000L IBC container
